Smashy Road Wanted Hack interface with various settings and text.

Anon gives advice on designing combat encounters.

Crazed cat battle cats strategy. How to play hacked battle cats.

going by A, or if i want to switch tracks do i have to roll with 150/30 cf or ticket roll time to swap tracks or something idk i just cant seem to understand anything 17 Upvotes 26 Upvotes 3 Upvotes 1 was looking at the rewards for the cat fruit stages and saw that no matter the difficulty they all have the same rewards. If all cat fruit stages give the same rewards. Then why do the harder difficulties? 2 Upvotes 3 Upvotes this may sound dumb, but is there a way to track past rolls on banners for seed purposes i dont wanna waste sweet catfood on a 10 draw while im saving up gallery 7 Upvotes 3 Upvotes i used to play a while ago but stopped and i remember there being tons of battle cats hacking discordb but it seems they all dissappeared, what happened to them? 10 Upvotes gallery 3 Upvotes 1 Upvotes gallery 5 Upvotes 10 Upvotes 19 Upvotes ALL POSTSThz but I'm not sure how to use it00First you need to draw 10 rolls and record them in the website next you wait and then click the appropriate link Battle Cats MITM Mailbox Hack "Playing it like a fiddle." This mailbox hack allows players to acquire items and/or cats of their choice. NOTICE This method DOES NOT SEEM TO WORK ANY MORE for versions v1.1.0 and above as mentioned here (at least not without root/jailbreak access), possibly due to either Certificate Pinning or usage of nonces to prevent replay attacks. If Certificate Pinning was implemented, it might be possible to remove the pinned certificate or replace it with a self-signed certificate from Fiddler from the APK/IPA binary file of the application, but this requires root/jailbreak access (and it might be too difficult for the layperson to execute without some kind of automation script to help them do it). Unfortunately, I do not currently possess any rooted/jailbroken devices, and thus, I am unable to test this theory out. If someone else is able to conduct further investigations into this, feel free to report your findings and maybe put up an issue/PR about it. That said, PONOS had never informed me formally/officially about this patch, even after I had responsibly disclosed this issue to them. They might have figured it out internally by themselves and decided to not inform me about it at all (or forgot to inform me). The legacy descriptions below will be kept as is for archival and posterity reasons. Disclaimer This repository was made only for research and educational purposes. I am not personally responsible in any way for any unethical malpractices because of this tool. If PONOS were to approach me to take down, archive or privatise this repository, I will be obliged to follow their will. Please support the developers of Battle Cats so that they can add more content for the players of Battle Cats! ✖️(❗️) UPDATE (9 Jan 2020): I kindly raised an issue regarding this MITM vulnerability to PONOS through an in-game inquiry (for the purpose of responsible disclosure) with an added suggestion of encrypting the data being transmitted but they just simply banned my savegame file, so... ❗️ / I am currently contacting PONOS Games through email and through their contact/inquiry page to check with them and update them regarding this MITM vulnerability. I will post more updates if they get back to me with any kind of statements/news/notices/messages/reports/accounts. Features This hack follows a Man-in-the-Middle (MITM) network approach instead of the usual save data modification (using transfer code and confirmation code). The latter would be more easily detected by the corresponding servers if playing online. This method would not require any jailbreaking, rooting or any game cheating/hacking software, except for cases of usage with Android versions beyond Nougat (>= 7.0). As far as I know, this method is also region-insensitive since it just utilizes the main Internet connection to ponosgames.com, instead of taking advantage of region-specific package names and hash salts. This method allows users to specifically curate the list of items or/and cats (including expendables like Rare Tickets, Treasure Radars, EXP and Cat Food) that they desire to obtain (such as retrieving cat units locked based on story progress or past limited-edition cat units). Usage I will develop the autoback.sh script further (with maybe a Python script add-on) and maybe add some clearer .gif tutorial video recordings when I am less busy and have more time. We will be using Fiddler from Telerik since it is free, so download and install Fiddler on your computer. Of course, you could use Wireshark, Firebug, Charles Proxy, mitmproxy, etc. and I would assume that the steps would be similar. At the time of this writing, I was using Fiddler v5.0 (and it is working for Battle Cats v9.7). Firstly, connect your mobile device (or emulator) to your computer's Internet connection (possibly through the Mobile Hotspot feature). Next, setup your Fiddler to decrypt HTTPS traffic through SSL proxying (follow this tutorial). After that, configure your mobile device to pass their HTTPS traffic to Fiddler (follow this tutorial for iOS devices or this tutorial for Android devices). Do take note that without rooting, this method will only work with Android versions before Nougat (< 7.0). Beyond Android Nougat, root access would be required. You can Google how to root an Android device. After rooting, you can refer to this page to check how to install System-Truste Certificate Authorities (maybe can use Magisk\*). Once the traffic is re-routed through your computer, set a filter in Fiddler's Filters tab to show only the host nyanko-items.ponosgames.com and tick the options Break request on POST and Break request on GET with query string. After the filter setup is done, go to Actions and press Run Filterset now. On your mobile device (or emulator), open up your Battle Cats and go to the Mailbox (in the bottom-right corner of the Main Menu). Fiddler should show a red-colored GET Web Session to so select that and click Break on Response. NOTE: If Fiddler indicates another red-colored GET Web Session to just let that Run to Completion and ignore it as it is not relevant to our objective. Through TextView on Fiddler's Inspectors tab, you would be able to edit the response by following this JSON format: [ { "id": 1, "accountId": "", "title": "Items", "body": "", "clientVersion": 90700, "country": "en", "accepted": null, "created": , "items": }, { "id": 2, "accountId": "", "title": "Cats", "body": "", "clientVersion": 90700, "country": "en", "accepted": null, "created": , "items": }, { "id": 3, "accountId": "", "title": "True Form Cats", "body": "", "clientVersion": 90700, "country": "en", "accepted": null, "created": , "items": }, { "id": 4, "accountId": "", "title": "Talent Orbs", "body": "", "clientVersion": 90700, "country": "en", "accepted": null, "created": , "items": } ] You should modify the value of country to your respective region defined by PONOS. Possible values include (but might not be limited to): en, jp and tw. Also, just to clarify, the value of itemCategory indicates the type of item that the user will receive (0 is Items, 1 is Cats, 3 is True Form Cats and 4 is Talent Orbs). Edit the values of , , , and accordingly to valid values. Pick your item, cat, true form cat or/and talent orb choices from the lists provided (cat\_list.json, true\_form\_cat\_list.json, item\_list.json and talent\_orb\_list.json) and feel free to edit the "amount", "title" can also be changed to whatever you like. For True Form Cats, ensure that the specified Cat actually has a True Form (since not all Cats have True Forms). You can verify against the list on the Battle Cats Wikia on Fandom here. Forward the response to Battle Cats by clicking Run to Completion and it will show the items in the Mailbox. Take note that if you take too long to do the previous steps, Battle Cats might respond with a timeout (Cannot display due to connection error) and you might need to redo the whole process again. Click the Accept button and it will send a POST request to which will be intercepted by Fiddler again. Click on Break on Response again and this time, you need to send a blank 200 OK response (which you can send through HexView) instead of 400 Bad Request. Edit the HTTP Response Header Fields as follows: HTTP/1.1 200 OK Date: Day, DD MMM YYYY HH:MM:SS GMT Content-Type: text/html; charset=UTF-8 Content-Length: Connection: keep-alive Server: Apache Replace Day, DD, MMM, YYYY, HH, MM and SS accordingly. The value of should be consistent for both the GET and the POST requests. Click Run to Completion and Battle Cats should show you a dialog box showing that you have received the items/cats specified. Click OK. The corresponding items/cats would then be added to your inventory. Do remember to exercise moderation (or don't even cheat at all!) so as to prevent getting banned. Acknowledgements Credits to this Reddit post made by u/cmrrny for the original hacking method, which was actually apparently inspired by this older post made by u/EasyMoneko, who was an active and very helpful user on the Battle Cats Subreddit. Someone by the username of u/NekoB0x on Reddit, inspired by this repository and the original Reddit post, made an instructional step-by-step tutorial on how to execute this hack on an Android device using termux, iptables and mitmproxy. You can go check it out and follow its steps here! Page 2 You can't perform that action at this time. You signed in with another tab or window. Reload to refresh your session.
